Local News in Foreign Languages

We know that immigrating to a foreign country is often a challenging and life-altering experience. And learning a new language can be an even more tiring and time-consuming process! Our Prototyp will be the new place to go when it comes to learning a new language through the news of your new country!

We make trending local news, written in the national language, accessible to speakers of other languages, by presenting them with adjacent previews of both the original and the translated version.

This offers people an amazing opportunity to learn the language of their new home, effectively using real language texts, rapidly enriching their vocabulary with new words and phrases. At the same time, users can contribute to the constant improvement of our Prototyp by correcting and submitting possible errors in translation. By doing so, this helps upgrade the translation algorithms to improve future translation results.
