

Prêt-à-LLOD

Overview of the Sustainability Plans of the ICT-29b) Projects

John P. McCrae (NUIG)
and Thierry Declerck (DFKI)

HORIZON 2020¹

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 825182

6 Funded Projects in Call ICT-29b

Global Under Resourced MEdia Translation

(Cross-Lingual Embeddings for Less-Represented Languages in European News Media)

(European Live Translator)

(Cross-Lingual Embeddings for Less-Represented Languages in European News Media)

COMPRISE

(Cost-Effective, Multilingual, Privacy-driven, Voice-enabled Services)

Bergamot

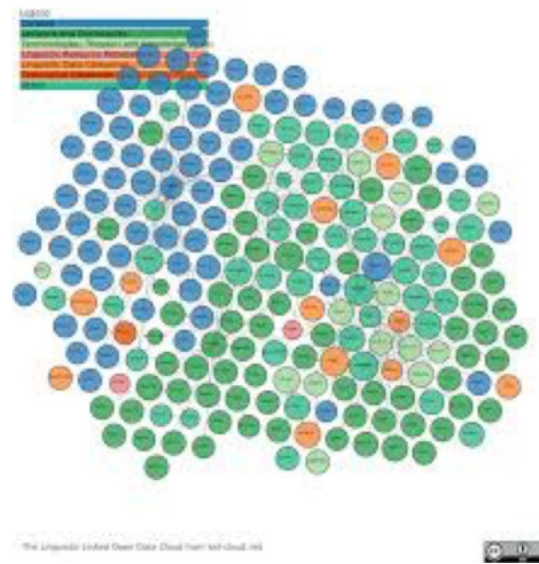

(Browser-based Multilingual Translation)

(Ready-to-use Multilingual Linked Language Data for Knowledge Services across Sectors)

Related Infrastructures

Linguistic Linked Open Data cloud

European Language Resource Coordination
Connecting Europe Facility

CLARIN - European Research Infrastructure for Language Resources and Technology

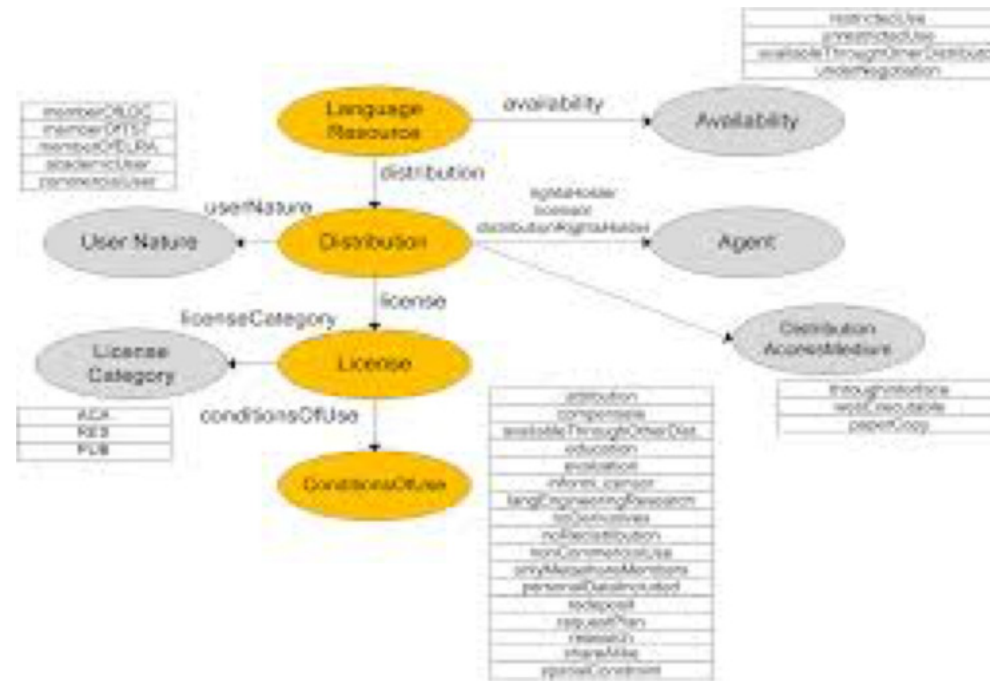

A network to enhance and support digitally enabled research and teaching across the Arts and Humanities

Standards and Metadata

International Organization for Standardization

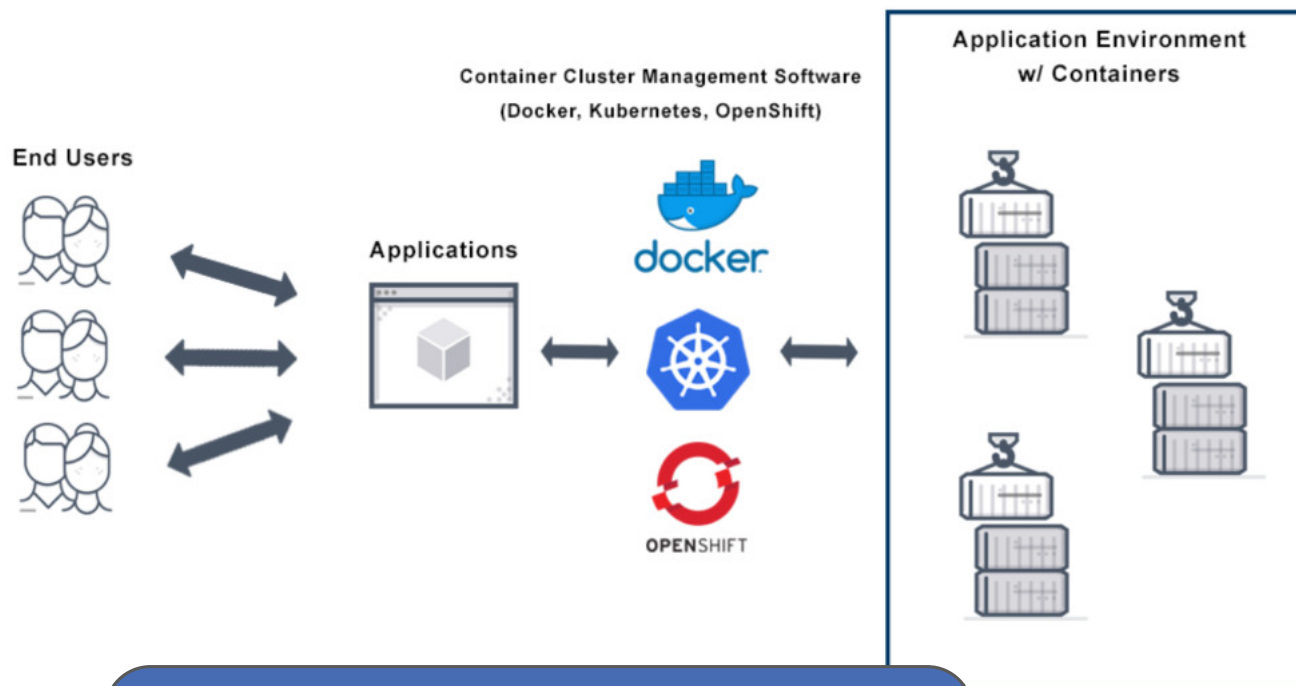

Metadata for licenses, past LIDER project

Discover language resources for your needs

Technologies

Training Activities (Prêt-à-LLOD)

Summer Datathon on Linguistic Linked Open Data, Dagstuhl 2019

Sustainability in Prêt-à-LLOD

The Prêt-à-LLOD project includes a **work package** dedicated to “**Sustainability and Community Building**”

- Therefore compiling information on **sustainability strategies in the partner projects** funded in the H2020 Research and Innovation Action, “Domain-specific/challenge-oriented Human Language Technology”
- This is a first step towards the generation of a document that will address the issue of **sustainability for the field of language technology** in general.

The specific technological contribution of Prêt-à-LLOD consists of developing tools to **combine language services and resources into complex pipelines** by use of semantic technologies. This leads to sustainable data offers and services that can be deployed to many platforms, including as-yet-unknown platforms, and can be **self-described with linked data semantics**

Sustainability in Prêt-à-LLOD (II)

By means of declarative metadata firmly grounded in Semantic Web **standards**, the Prêt-à-LLOD project achieves both a higher level of **portability** than previously known, as well as improved **metadata transparency**, sustainability and re-usability. Besides, Prêt-à-LLOD contributes with an intense work around standardisation activities with standardised formats for resources, models for metadata, portable services based on **open standards**, **vocabularies** and **best practices**, that will be available as part of a sustainable **data value chain**.

Notable work of Prêt-à-LLOD is dedicated to the further development of W3C community standards, like **OntoLex-Lemon** and **NLP Interchange Format (NIF)**

Summary

- Providing data, tools and services to **ELG**
- Contributing to other infrastructures: **CLARIN, DARIAH, ELEXIS, LINDAT**
- Standardisation work (**W3C, ISO, OASIS, ...**)
- Open sources deliveries (**GitHub**)
- Training and **education**
- **Dissemination** in journals and conferences
- Public Engagement (press, blogs, social media etc.)

Thanks. Questions?
